

HEALTH CARE ADVISORY SERVICES

BUILDING RESILIENCE IN HEALTH CARE SYSTEMS

The pandemic iterated that a strong health care system is not about the quality of care alone but leveraging robust technologies as well.

In light of COVID-19, pandemic-level preparedness and response readiness need to be in place to prevent loss of lives and destabilization of economies. This is further substantiated by the fact that the global architecture for public health contributes to a significant part of a region's economy and development.

Robust health care systems are not only a social imperative but are crucial for the long-term sustainability of economies and societies. There is a global need for strengthening of health systems which involves reviewing of health policies and regulations and conducting situational assessments to enable the systems to perform efficiently and effectively.

To render quality care, it is important to revamp public health systems through private sector investments and public-private partnerships.

The private sector plays a significant role in the industry through investments in modern health care facilities, pharmaceuticals (drug and vaccine manufacturing, digital pharmacies), medical technologies, medical education.

Additionally, health-focused programmes adopted by organisational CSR activities have been instrumental in dealing with several health issues.

Both private and public systems can be hauled by bringing in newer technologies along with effective decision support systems to ensure quick responses and appropriate interventions, where necessary. These technologies enable conducting assessments of running programmes or measuring the impact efficiently.

With the world focusing on the Net positive solutions, it is even more important today to induct a green approach in terms of technologies used in health care facilities and infrastructure.

HOW BDO INDIA CAN HELP

As part of our Business Advisory Services, we offer health care institutions a focused range of services that are customised to their unique requirements. We provide guidance to enable them to respond efficiently and render quality care across the health care spectrum and support in rethinking about resilient and enhanced health systems (both public and private) and building better health care programmes.
